## Adapting to the Ever Changing Safety Culture - Lockout/Tagout

The safety and well-being of our staff and clientele is the number one priority for us. Eliminating or mitigating any exposure to hazards is our priority when planning the procedures involved with all assigned tasks relating to job completion. Therefore, Fumigation Service & Supply, Inc. has begun the process of creating a database of short safety video modules. These modules

## Dave's Soapbox

“Recent studies have demonstrated that the Montreal Protocol has been more effective at curtailing global greenhouse gas emissions than any other international effort even though climate change was not a real consideration during the initial treaty negotiations in the 1980’s. By 2025 an estimated 500 million tons of carbon dioxide will decrease compared with 2005 levels.

## Bugs in the House... Breaking It Down Room by Room

Insects are known to be some of the best organisms in the world at finding and exploiting niche environments. We find insects living in nearly every setting on the surface of the earth. There are insects that live in ice, snow, deserts, jungles, swamps, forests, prairies, mountains, valleys and everything in between. Knowing their affinity to find suitable homes anywhere and everywhere, it is not unusual that our own homes can become sanctuaries for many insect

## How to Get Rid of Clothes Moths in Your Closet

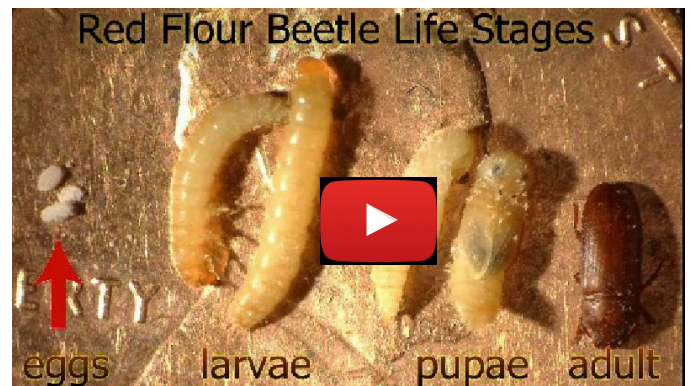

## Pests of the Food Industry:

### Flour Beetles

One group of troublesome pests in the food industry and homeowner's pantry are the Red and Confused flour beetles. These important stored product insects look similar. Under a microscope they are different in appearance, and in your production facility they are different in biology and behavior.
