

## Quality Pheromones and Trapping Systems

**Insects Limited, Inc.** researches, tests, develops, manufactures, and distributes quality pheromones and trapping systems for food infesting insects to a global marketplace with a focus on the statement above. At our core, Insects Limited focuses on bringing **Science, Education, and Innovation to the Stored Product Industry.**

# All Beetle Trap Only (No Attractant) IL-2600

## Product Description

Working closely with the pest control industry, Insects Limited recognized pest control operators and residential customers alike needed a device that could fit in areas suspected of insect infestation without taking any space.

The All Beetle Trap includes 10 complete All Beetle Traps. This product does not include the necessary lures or attractant.

The All Beetle trap has a clear view lid for easy inspection, a sturdy polypropylene base and a replaceable tray that snaps in from below.

This low profile trap slides easily beneath equipment or fits nicely into corners or along walls.

## Features and Benefits

By pairing this device with the appropriate attractant, the All Beetle trap will allow you to monitor the areas needed to help determine:

- Is there a presence of insects in the suspected area? If yes, then the All Beetle trap can help pinpoint the infestation.
- Are the numbers of insects present increasing or decreasing?
- If continuing to increase, further investigation or professional measures need to be taken

## How the All Beetle Trap Compares to Other Products on the Market

The All Beetle trap has been tested by multiple third party professionals in both the lab and the field and has proven to be the most effective device on the market. Because of its clear top, the All Beetle trap is the easiest on the market to inspect.

Competing traps take too much time and effort. For a professional, too much time is spent walking to each device, kneeling, taking off the top, and counting the insects of an already, too small, adhesive area.

The clear top allows professionals to simply glance down at the device to find out if there is a presence of insects. If not, they simply keep moving, allowing more time for inspection. The loop on the top allows the device to be tethered to a permanent object therefore reducing the possibility of a lost device as well as lost insect data.

To ensure the lid will not pull off with the tether, Insects limited has created deeper hooks as well as securing joints between the clear top and the blue base. The top is vented in 3 places to allow for the disbursement of pheromone and kairomone attractant, and the bullet lure has a clipin spot allowing for the maximum catch of insects in the adhesive.

Each kit comes with 10 sets of the clear top, blue base, and snap-in replaceable tray.

## How the All Beetle Trap is Designed

The All Beetle trap was methodically designed by entomologists who work with and study the target insects every day, and who understand the needs of an easy to inspect device.

They ensured the device lay flat so as to not have any obstacles for the insects to climb. The slope of the device is mathematically calculated to ensure the insects will create momentum ascending the trap, and meets a curved edge forcing the insect to fall into the adhesive to be captured instead of making the decision to descend back down the slope preventing capture.

Our entomologists spent hours observing the insects to determine a texture of the slope to complement the insects' behaviors that were observed.

## What to Expect with Your Order

Many customers purchasing the All Beetle trap (without an attractant or adhesive) are doing so because they already have the attractant and adhesive and only need the trap.

Once the trap is received, they will take them out of the box, remove the snap in tray and apply their attractant and/or their adhesive.

If applying a bullet lure, the vial can be clipped to the lid from the bottom and a glue board will be placed in the removable tray.

If applying the Pantry Patrol, spread the gel around the removable tray and snap the tray back into the base. If you are applying the SPB lure, Dermestid attractant, or Hide beetle lure, place the All Beetle trap glue board in the removable tray, and then stick the attractant to the glue and replace the tray.

When the All Beetle trap is loaded with its attractant, place the device on a flat surface roughly 2-5m (5-15ft) apart.

Depending on the levels of infestation, insect catches could happen within 24 hours 2 weeks.

## Shipping Information

Each set of 10 has dimensions of 6 inches X 6 inches X 4 inches and weighs 1 lb for shipping purposes.
