

Quality Pheromones and Trapping Systems

Insects Limited, Inc. researches, tests, develops, manufactures, and distributes quality pheromones and trapping systems for food infesting insects to a global marketplace with a focus on the statement above. At our core, Insects Limited focuses on bringing **Science, Education, and Innovation to the Stored Product Industry.**

Cigarette Beetle NoSurvivor Kit (IL-564)

Product Description

The Cigarette Beetle NoSurvivor Kit is designed to attract and trap Cigarette Beetle, *Lasioderma serricorne*. The kit includes 10 NoSurvivor™ Hanging Traps and 10 pheromone lures for Cigarette Beetles.

The Cigarette Beetle NoSurvivor Kit (IL-564) features Insect Limited's signature pheromone lures that attract Cigarette Beetle, *Lasioderma serricorne* with a controlled release of pheromone over 3 months. Cigarette Beetle adult males are attracted to the sex attractant pheromone in the lure and are readily captured in the glue when paired with the NoSurvivor Trap™. The cylindrical shape and the softer polyethylene that the lures are made from optimizes the pheromone release for Cigarette Beetles.

These traps can easily be hung throughout living spaces, food processing plants, tobacco processing facilities, tobacco shops, museums, grocery stores, warehouses or storage rooms. Insects that are attracted to the lure are readily stuck in the glue upon entering the trap.

How This Product Can Help You

This Cigarette Beetle NoSurvivor Kit pairs the science of insect biology to the technology of a trapping system to assist you with the task of monitoring for these pests in your environment. In an Integrated Pest Management program, monitoring can ultimately help you reduce pest numbers. When paired with a trapping system, the lures do this by:

- 1.) Telling you if the beetle are present
- 2.) Indicating where they are coming from
- 3.) Finally telling you whether the control measures (E.g. removal of the infested product, increased sanitation, freezing, etc.) that you have taken are working or not

What to Expect

When you open this kit box, you will find the 10 traps folded together, and stacked along with 10

- How to place the lure into the trap individually packaged Bullet Lures and an Instruction Sheet of: Where to place the traps
- When to replace the traps

The traps will need to be first pulled apart and then folded into place by hand, according to the instructions on the trap itself. Each pheromone lure is individually packaged to keep them fresh until you are ready to place them into a trap. When you are ready to use this product, the lures should be removed from their packaging and placed on their sides into the center of bottom sticky area in each trap.

Although the pheromone in the lures is non-toxic, avoid direct contact with your skin if possible or simply wash your hands with warm water and soap if contact is made. Pheromone Bullet Lures are non-pesticidal and only act as a beetle attractant. If the glue from the trap accidentally gets onto your hands, it is not toxic and can be easily washed off using soap and warm water.

The traps are then ready to be placed out in areas where beetles are being seen to begin monitoring for male beetles that are attracted to the female sex pheromone. These traps will give you the information that you need to reduce or remove your beetle issue.
