

Quality Pheromones and Trapping Systems

Insects Limited, Inc. researches, tests, develops, manufactures, and distributes quality pheromones and trapping systems for food infesting insects to a global marketplace with a focus on the statement above. At our core, Insects Limited focuses on bringing **Science, Education, and Innovation to the Stored Product Industry.**

Pest Detective™ Kit IL-168-20

Product Description

Comes in quantities of 20. This kit includes ready-to-use Pest Detective™ traps that are pre-loaded with pheromone for multiple species of Food Moths such as Indianmeal moths, Mediterranean Flour Moths and Almond Moths

Features and Benefits

Pest Detective Kits feature Insect Limited's effective and easy-to-use Pest Detective trap. Pest Detective traps have food moth pheromone incorporated into the glue on the interior of the trap and come out of the package ready-to-use. The pheromone in the Pest Detective trap contains powerful pheromones for multiple Food Moth species. The pheromones in this lure will attract Indian meal moth, *Plodia interpunctella*, Almond Moth, *Cadra cautella*, Mediterranean Flour Moth, *Ephestia kuehniella*, Tobacco Moth, *Ephestia elutella*, Raisin Moth, *Cadra figulilella* and other species. The pheromone infused directly into the glue is paired with the uniquely designed Pest Detective trap which is an excellent means of capturing these moths. These traps can easily be secured onto the underside of counters in retail settings or homes and can also simply be placed onto shelves, counters or onto the floor to monitor for moth activity. Moths that are attracted to the lure are readily stuck in the glue upon entering the trap.

How This Product Can Help You

This Pest Detective Kit pairs the science of insect biology to the technology of a trapping system to assist you with the task of monitoring for these pests in your environment. In an Integrated Pest Management program, monitoring can ultimately help you reduce pest numbers by:

1. Telling you if the moths are present
2. Indicating where they are coming from
3. Finally telling you whether the control measures (E.g. sanitation, infested product removal, freezing, etc.) that you have taken are working or not.

What to Expect

When you open this kit box, you will find the 20 pre-formed, ready-to-use traps. The re-sealable, gas-barrier packaging keeps the traps fresh until you put them out. The instructions are printed on the outside of the packaging. The instructions explain:

- How and where to place the traps in residences and in commercial settings.
- When to replace the traps.
- How to store unused traps for extended periods of time while retaining their full attractancy

All of the pheromone-infused traps come in a re-sealable barrier-film package to keep them fresh until you are ready to place them out. When you are ready to use this product, the heat-sealed end of the package should be torn open and the traps that you would like to begin using should be removed. The zip lock package should then be re-sealed to keep the remaining traps fresh. Although the pheromone attractant and the glue are non-toxic, avoid direct contact with your skin if possible or simply wash your hands with warm water and soap if contact is made. Pheromone lures are non-pesticidal and only act as an insect attractant. The traps come ready to be placed out in areas where moths are being seen and they can easily be adhered to the underside of counters or on top of any horizontal surface. These traps will begin your monitoring program for Food Moths that are attracted to the pheromone infused into the glue on the interior of the traps. These traps will give you the information that you need to locate your moth issue.
